## MAKING OPEN SOURCE MORE INCLUSIVE

Red Hat is committed to replacing problematic language in our code, documentation, and web properties. We are beginning with these four terms: master, slave, blacklist, and whitelist. Because of the enormity of this endeavor, these changes will be implemented gradually over several upcoming releases. For more details, see [our CTO Chris Wright's message](#).

# CHAPTER 1. MANAGING THE PUBLICATION PROCESS OF INTERNAL COLLECTIONS IN AUTOMATION HUB

Use automation hub to manage and publish content collections developed within your organization. You can upload and group collections in namespaces. They need administrative approval to appear in the **Published** content repository. After you publish a collection, your users can access and download it for use.

Additionally, you can reject submitted collections that do not meet organizational certification criteria.

## 1.1. ABOUT APPROVAL

You can manage uploaded collections in automation hub using the **Approval** feature located in the left navigation.

### Approval Dashboard

By default, the **Approval** dashboard lists all collections with **Needs Review** status. You can check these for inclusion in your **Published** repository.

### Viewing collection details

You can view more information about the collection by clicking the **Version** number.

### Filtering collections

Filter collections by **Namespace**, **Collection Name** or **Repository**, to locate content and update its status.

## 1.2. APPROVING COLLECTIONS FOR INTERNAL PUBLICATION

You can approve collections uploaded to individual namespaces for internal publication and use. All collections awaiting review are located under the **Approval** tab in the **Staging** repository.

Collections requiring approval have the status **Needs review**. Click the **Version** to view the contents of the collection.

### Prerequisites

- You have **Modify Ansible repo content** permissions.

### Procedure

- From the sidebar, navigate to **Approval**.
- Select a collection to review.
- Click **Certify** to approve the collection.

Approved collections are moved to the **Published** repository where users can view and download them for use.

## 1.3. REJECTING COLLECTIONS UPLOADED FOR REVIEW

You can reject collections uploaded to individual namespaces. All collections awaiting review are located under the **Approval** tab in the **Staging** repository.

Collections requiring approval have the status **Needs review**. Click the **Version** to view the contents of the collection.

### Prerequisites

- You have **Modify Ansible repo content** permissions.

### Procedure

- From the sidebar, navigate to **Approval**.
- Locate the collection to review.
- Click **Reject** to decline the collection.

Collections you decline for publication are moved to the **Rejected** repository.
